

Study design

- Groq: GPT-OSS-120B, GPT-OSS-20B
- OpenRouter: 10 endpoint configurations across 5 model families
  - MiniMax (2)
  - Cohere (1)
  - dots (l1)
  - Nemotron (4)
  - Poolside (2)
- 2,310 valid executions

Measured outcomes

Security (ASR)
Attack success rate

Utility (BU / UA)
Task completion quality

Missingness / provenance
Missing or ambiguous outputs

Main finding

Tool Filter's utility degradation was more consistent across configurations than its security benefit.
